???? Ubuntu Do you know a good link to understand how kernel is working and what's happening inside during bootup? I want to learn how system boots up and loads the different modules as well as how modules interact So how does kernel interact with different modules, and module loaders work, and how do I find them in the system and how do they work? !mainline | GKodjy

GKodjy: The kernel team supply continuous mainline kernel builds which can be useful for tracking down issues or testing recent changes in the Linux kernel. More information is available at but this is not really a help in the windows installer, which won't see the kernels in main. I know. No problem Thanks best to install linux in a virtualbox guest, then I'm on 18.04.1 and want to install alsa-utils. I can't find it in apt-cache, it's not in the default 18.04 repos Any way to get that? !info alsa-utils bionic alsa-utils (source: alsa-utils): Utilities for configuring and using ALSA. In component main, is optional. Version 1.1.1-3 (bionic), package size 945 kB, installed size 3107 kB !info alsa-utils artful alsa-utils (source: alsa-utils): Utilities for configuring and using ALSA. In component main, is optional. Version 1.1.26.1-1ubuntu2 (artful), package size 871 kB, installed size 3500 kB Well, 1.1.26... the actual version is 1.1.1 you'd want 1.1.26 then Interesting, I guess 82157476af
